

STAY PRIVATE

INFORMATION SECURITY DATASHEET

Secure email, instant messaging and file sharing both inside and outside the organisation.

All communications and notifications carried down secure channels. Each channel has its own searchable activity history, organised file storage area and user access rights.

Lifecycle management: automated user onboarding and offboarding, automated channel creation and adaptation plus user-friendly admin interface providing complete, granular control of users, roles, channels and access rights.

Turnkey deployment compatible with any existing infrastructure. BYOD access from email or SMS via adaptive multi-factor authentication based on device and user.

Patent-pending no-trail PIN access so that users do not need to remember complicated passwords. Corporate users can communicate directly from within their existing email account.

Secure, transparent activity histories, compliance monitoring and instant alerts reduce risk of data leakage, reduce exposure to phishing attacks, and deter insider threats by providing evidence of who has accessed what.

Data Security

- ✓ Servers housed in secure Tier 3+ data centres protected 24/7 by manned security and biometric access controls.
- ✓ Servers actively monitored 24/7, enterprise grade firewalls and anti-virus.
- ✓ Resilient architecture with full geographic redundancy.
- ✓ Logical separation of separate functional components.
- ✓ Secure, encrypted European Union-based* cloud storage plus further back-up options.

Encryption

- ✓ Data encrypted in transit using TLS/SSL with forward secrecy.
- ✓ Data encrypted at rest using multi-layer AES 256.
- ✓ Individually distinct, dynamically generated key for each file.

Data Privacy

- ✓ All data remains in the European Union* at all times. On-premise option for organisations with 1,000+ users.
- ✓ Technical architecture, Chinese walls, strict compliance policies and enforcement designed to ensure that no individual can access data without proper authentication.
- ✓ Conforms to ISO 27001, GDPR, and HIPAA industry standards.

User Experience and Features

- ✓ Modern, professional, white-labelled user interface available via web browser or native app.
- ✓ Drag and drop file sharing with automatic document management.
- ✓ Compatible with any corporate email and accessible via any email account or mobile device.
- ✓ Automatically generated, configurable primary channels ensure that client communications are accessible by all relevant employees.
- ✓ Increased user engagement driven by embedded features such as private notes, electronic signatures, AND private areas for individual users.

*Alternative locations including offshore jurisdictions such as the Channel Islands are available. Please contact us for more information.
