Vercara: A Leader in Securing Online Experiences

Hackers are constantly evolving their methods, and one successful attack can be devastating. That's why more than 2,000 enterprises around the world trust Vercara to protect their online presence, data, and brand reputation.

At Vercara, formerly Neustar Security Services, we are driving a 25-year legacy of success into the future. We offer a mission-critical portfolio of best-in-class cloud security solutions powered by a relentless dedication to protecting our customers' most important assets.

Our solutions are battle tested. Our industry-leading security services have proved their effectiveness in highly regulated industries and mission-critical applications. They run on a massively scaled, purpose-built, cloud-based security platform that effortlessly handles high traffic volumes and the largest online attacks.

Our human expertise is unparalleled. We understand that human intelligence, knowledge, and insights are key to defeating sophisticated attackers. Our security operations center (SOC) operates around the clock, and our customer service is available to provide hands-on guidance when you need it most.

Our solutions are always moving forward. It is our responsibility to stay ahead of the increasingly nefarious attacks that target our customers every day. We continually improve our offerings with deep, broad innovation to deliver the best, most current solutions, now and always.

INDUSTRIES WE SERVE

Vercara helps organizations across a diverse set of industries protect their digital presence:

- Financial Services
- Ecommerce
- Healthcare
- Online Gaming & Gambling
- Travel & Tourism
- Communication Service Providers

VERCARA

Securing the Online Experience

- People who always put customers first and understand the criticality of online security

- Proven success of protecting the world's most successful and respected brands

Industry-leading solutions that are purpose-built with expansive global coverage.

Best-in-Class Solutions

Our mission-critical, cloud-based security solutions protect your online presence with the highest standards of availability, reliability, and scale.

Authoritative DNS
UltraDNS and UltraDNS[2]

Ensure your digital infrastructure and online presence are always reachable with our enterprise-grade authoritative DNS solutions. They securely deliver fast and accurate query responses to websites and other vital online assets through a high-performance, fault-tolerant network. UltraDNS[2] seamlessly adds a second anycast resolution network for the highest degree of service-level redundancy, managed through a single pane of glass.

Protective DNS
UltraDDR (UltraDNS Detection and Response)

Identify and prevent attacks before they happen with the next generation of protective DNS. Our solution goes into action before an attack. It discovers and maps adversary infrastructure and analyzes communication patterns to stop ransomware, phishing, and supply chain attacks before they start. Our global network of secure recursive servers protects assets everywhere while delivering fast, reliable responses.

DDoS Protection
UltraDDoS Protect

Secure your digital infrastructure and online presence with our white-glove, fully managed DDoS protection service. Delivered through a purpose-built, low-latency, high-capacity network with 15+ Tbps of capacity and DDoS-specific protections, it detects and mitigates dangerous and complex DDoS attacks while allowing clean traffic to flow through. Flexible deployment options include cloud-based and hybrid solutions, with always-on or on-demand protection.

THREE ESSENTIAL SERVICES IN ONE ULTRA PLATFORM

A holistic strategy secures the online experience for customers and partners more effectively. UltraPlatform combines authoritative DNS, application protection, and DDoS protection in a powerful solution that:

- Ensures the availability and integrity of your online presence
- Protects your brand
- Lowers your total cost of ownership

Application Security
UltraWAF™

Protect your internet-facing applications, no matter where they are hosted, from data breaches, defacements, malicious bots, and other web application-layer attacks. Our always-on solution reduces costs and simplifies operations through consistently configured rules, with no provider restrictions or hardware requirements. It incorporates powerful bot management capabilities and offers flexible configuration options for both positive and negative security models.

Web Performance Management
UltraWPM

Find and fix website issues to ensure the best possible online customer experiences. Our solution brings together powerful tools including synthetic- and real-user monitors, extensive diagnostics and multi-domain views. It helps you discover the widest range of website issues such as unavailable or slow-loading pages and failing applications – and simplifies load testing your site ahead of new campaigns or enhancements to create seamless, rewarding customer experiences.
